

## FDA Compliance Declaration

Food Contact

### **Material:** PETG (transparent sheet, copolyester)

For the PETG material described below, we confirm its suitability for food contact based on the underlying technical data and test evidence for the raw material.

PETG sheets in transparent grade are physiologically safe (assessed in accordance with the recommendations of the German Federal Institute for Risk Assessment, BfR) and suitable for food contact.

The material meets the requirements of the relevant FDA regulations for food-contact plastics as well as the provisions of Regulation (EU) No. 10/2011 on plastic materials and articles intended to come into contact with food.

**Note:** This conformity applies to the untreated base material in transparent grade. For printed, coated, laminated or otherwise finished semi-finished products, as well as for the opaque/opal grade, suitability for the specific application must be verified separately.

- Overall and specific migration limits must be verified for the specific application (contact time, contact temperature, type of food) in accordance with Regulation (EU) No. 10/2011
- Compliance with migration limits in the finished component is the responsibility of the processing company

This declaration applies to the material in its untreated state, provided it is stored and processed properly.

This declaration is based on the technical data for the raw material and does not replace the processor's or end user's own testing or approval of the finished part.

Changes to the formulation or to the underlying standards and regulations remain reserved.
